8. Supporting Data and Interpretation

The above material distribution is derived directly from the packaging Bill of Materials provided for each product reference. Components marked as Other are kept as Other until supplier-specific material composition is confirmed or refined.

The family grouping is based on common Furka Roofrack packaging architecture. Product-level tables are included because label components and card board liner quantity differ between black and silver references.

9. Substance Compliance

Supplier declarations are used to support substance compliance assessment, including heavy metals, PFAS and Bisphenol A where declarations are available. Missing or not confirmed supplier information shall be followed up and updated in the technical file.

10. Recyclability Assessment

Based on the ERP material categories and supplier documentation available, corrugated board/paper, wood and paper labels are considered recyclable in existing systems. Plastic materials require supplier confirmation and assessment according to applicable recycling criteria.

11. Packaging Minimisation

Packaging design is justified by product protection, transport constraints, handling requirements and palletisation requirements. Packaging weight shall be reviewed when packaging design, supplier or material data changes.

12. Supplier Documentation

14. Change Management

This technical file shall be updated when packaging design changes, suppliers are modified, materials are updated, product status changes, responsible legal entity changes, or regulatory requirements evolve.
